

What is claimed is,

1. A dial lock for a traveling bag, wherein a means for rotating a bolt of the dial lock between a locking position and unlocking position of a lock is provided in addition to a function of the dial lock.

2. The dial lock for a traveling bag as claimed in claim 1, wherein the rotary means provided at each traveling bag is a rotary body capable of being rotated by a common key.

3. The dial lock for a traveling bag as claimed in claim 1, wherein a rotary plate having a key hole for the common key is formed to have an oval-like shape obtained by cutting off both sides of a disk shape.
